

Concussion Management Model

The ImPACT Concussion Management Model for athletes, schools and teams is a five step protocol of best practice recommendations for how multidisciplinary teams can best use ImPACT. The ImPACT Concussion Management Model builds partnerships with healthcare professionals and athletic trainers to offer training and resources for affordable concussion management to benefit athletes and their parents – before, during and after a concussion is suspected or diagnosed.

ImPACT's ongoing commitment to research and the Concussion Management Model may assist in making safe return to play decisions, which helps to limit the likelihood of long-term injury. While ImPACT assists in making return-to-play decisions, it should never be used as a stand-alone tool or as a diagnostic instrument.

The ImPACT Concussion Management Model

For more information about incorporating the ImPACT Complete Concussion Management Model into your athletic program, contact:
